Fundism by BlockCabin

System Diagram

Project Outline

This Crowdfunding decentralized app enable users to fund campaigns for interest-based organizations. It ensures low-risk support for new ventures and enables global supporters to gain support. This is particularly useful for projects created by individuals or small-distributed teams.

Project Scope

This system is an initiative taken by our Project to explore blockchain and to show how powerful the technology can be and how useful it is in solving trust issues in fund collection. The task that can be done in future is to create a better user interface (UI) for this project as this project requires more time to be integrated with a good UI as it requires us to design a universal UI for all funding players.

Everything will be tokenized and connected by a blockchain one day... – Fred Ehrsam

Project Features

- > Decentralized system
- > Transparency
- > Real-time Reporting
- > Data Security
- > Donor Privacy
- > Immutability

Our Mission

Our Project provide an interface for listing all the campaigns, funding by payers and claim his refund or campaign specific tokens depending upon the result of the campaign and if campaign gets success token is generated to the needy one(Mustahiq).
